Q: Is it safe to have a dental visit while pregnant?
A: Yes! In fact, it’s recommended. Morning sickness and hormonal changes can make you more prone to gum disease and cavities when you’re pregnant, which can impact your baby’s health. A dentist can treat these problems or help you avoid them.

Q: At what point in my pregnancy should I have a dental check-up?
A: Get a dental check-up before your delivery. If your last visit was more than six months ago, or you have any oral health issues, schedule an appointment as soon as possible.

Q: What information should I tell my dentist about my pregnancy?
A: Tell your dentist that you are pregnant and your due date. Also be sure they are aware of any medications you’re taking, specific medical conditions, any form of tobacco or drug use, or if your pregnancy is high-risk.

Q: What about dental treatments – are they safe while pregnant?
A: Yes. X-rays, local anesthetics and most pain medication are safe as long as the dentist is aware of your pregnancy.

Q: What steps should I take to prevent oral health problems during pregnancy?
A: Be sure to brush twice a day with fluoride toothpaste, clean between your teeth, get a dental check-up, and limit sugary foods. If morning sickness occurs, rinse your mouth with one tsp of baking soda in a glass of water.

Q: Why is my oral health important to my baby after she is born?
A: Moms and babies share everything — including bacteria. If you have cavities, you also have the bacteria that cause them in your mouth. This bacteria can be passed from your mouth to your baby’s mouth and increase her risk of cavities, too — so it’s important to get a dental check-up and establish a healthy smile before the baby is born.

Q: When should I schedule my baby’s first dental visit?
A: Your baby should see a dentist after their first tooth appears, but no later than their first birthday. If you need help finding a pediatric dentist or a dentist trained to treat children, ask your pediatrician for recommendations or visit insurekidsnow.gov.

Q: Are baby teeth important?
A: Yes, it is important to keep baby teeth cavity free even though they will eventually fall out. Baby teeth help children to eat healthy food, develop their speech, and maintain space for their adult teeth. Bacteria that cause cavities in baby teeth stay in the mouth and may cause cavities in permanent teeth.
